Jar-s size SmartPower Deluxe Blender 4-speed. Montel Williams Blender, originally known as the Health Master blender, is advertised as a blender that does everything. . . is? Instead of simply mixing, this blender is meant to juice, grind, grate, whip and 26 other things that normal blenders don't do. With all these features, the Montel blender is designed as your main kitchen tool. It should do so many things easily that you can get rid of many other small devices that mess with shelves and counters. This blender promises to make your life easier by helping you simplify things in your kitchen. Because it does so much, cooking should be easier and you should spend more time eating healthy food with your family. Before we get to the review, I'll let you know right in advance that the HealthMaster blender doesn't make it our pick of the best blenders available. At the price it sells, it should have done it easily. . . . But at the time of the review, it didn't just cut it. . . . It wasn't even close! Features and benefits Montel blender Montel Williams Blender has a wet dry stainless steel blade that allows you to mix anything without worrying about mould or mould. In addition, its 70-ounce jug is large enough to mix whole batches of soup at once or smoothies for a large group. The jug is also made of polycarbonate alloy, making it a dishwasher safe and difficult to damage, scratch and destroy. In addition, the Montel blender has 8 speeds, so you can control its mixing power. It also has a built-in safety feature that stops the blender when it is at risk of overheating and allows you to restart it once the engine has cooled down. With an engine of almost 2 horsepower, this blender has more power than almost all products on the market, giving it the power to take on the most difficult kitchen tasks. The power of the blender of montel williams, a health master blender, is its main advantage. In addition to crushing ice and chopping raw vegetables, it can make nut butter and shredded meat, which are two tasks beyond the reach of most blenders, the versatility of the machine also gives it an advantage over other kitchen mixers, since it does so many different tasks, all in one small device. Instead, since this blender is just one device for which you need to find space, it makes it so that you have more space for other things. Affiliate Links/Affiliate Policy/Latest Update 2020-11-08/Images of amazon product advertising API harm Although Montel Williams Blender is effective, it's not as effective as some other blenders making similar claims. While it's also somewhat cheaper, it might not be worth paying less for a blender that doesn't do everything it's meant to do. While this blender is supposed to emulsifie everything you put into it, this may not be the case every time. Leafy greens seem to be the biggest problem with this blender. Many people say it beats other blenders in the same price range when it comes to green smoothies and fiber emulsions, but sometimes small pieces still remain in the smoothie at the end. Some users report problems with some of the heavy features of the Montel blender, such as its ability to help you make peanut butter. These users report that the blender is close to overheating, switches off and does not start for 15-20 minutes, and that it does this several times in one batch. One of the biggest concerns many people have is the mechanical problems that this blender can sometimes have. A common complaint is that the blades and other parts of the pedestal begin to rust. Given that it is advertised as all stainless steel, this is very worrying. Many also say that the jug begins to bleed after a short time. Overall, The Health Master Blender only seems to last about 6 months to a year before breaking. Another big problem is that many people who have tried to get parts replaced or refunded have encountered some difficulties despite the guarantee that a blender should have. Needless to say, this can make some heavy mixing tasks even more difficult than usual, not easier. Summary Although many people compare this blender to Vitamix Blender, the facts seem to be that there are serious problems with certain parts of it. The Montel blender has some potential, but it's probably worth spending a little more to get a heavier model if you're going to do a lot of mixing with thick ingredients. As mentioned earlier, it doesn't make it our choice of the best blenders available, but on the other hand, if you want to mix soups and make occasional smoothies, this blender gets the job more than it does at work, but you can argue that it's a bit expensive!
